11. 🗵 The request for reconsideration has been considered but does NOT place the application in condition for allowance because:

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Munroe does not and would not be employed in a modern operating system, such as Windows. This statement is based on the well known DLL's (dynamic link libraries) in Windows, which contain a library of common files, utilized by many application in Windows. The reason Munroe could not be a modern operating system is because Monroe uses a hierarchy of domains to control access. A high domain has the best protection, while a lower domain has less protection because anything has access to it. With that said, a DLL needs to have access by all, so it should go in a low domain, however, it needs to be protected, so it should go in a high domain. This is the problem with Munroe, as explained by applicant. Examiner would like to point out that the claims never cite a "modern computer" or "utilizing DLL's" and therefore any age or type of computer (Munroe's computer) would apply.
